

# Legal Concepts and Documents

## CompTIA PenTest+ (PT0-003)

**Domain:** 1.0: Engagement Management

**Objective:** 1.2: Explain collaboration and communication activities

## Video Overview

This video provides an overview of the legal agreements and documentation relevant to penetration testing. As you prepare for certification, understanding these documents isn't just about compliance; it's about operating responsibly and professionally in the field.

## Key Topics Covered

- **Service Level Agreement (SLA) and Terms of Service (ToS):** Defines the services to be provided, the level of delivery, penetration tester responsibilities, and client responsibilities.
- **Shared Responsibility Model:** Clarifies security obligations between a cloud provider and its customers, emphasizing the cloud provider's responsibility for the security of the cloud and the customer's responsibility for security within the cloud.
- **Non-Disclosure Agreement (NDA):** Protects a client's sensitive information, including personally identifiable information, research and development data, and intellectual property; these agreements are legally binding and often reciprocal.
- **Statement of Work (SOW):** A detailed document specifying the exact work to be performed, including payment milestones, project timeframes, caveats, disclaimers, and deliverables.
- **Master Service Agreement (MSA):** An overarching document that establishes general terms and definitions, streamlining future engagements and providing a foundational understanding for both clients and testing companies.
- **Authorization Letter:** A formal letter that grants permission for testing activities, essential for avoiding the perception of illegal attacks and particularly vital when testing cloud systems, often requiring authorization from both the client and third-party cloud provider.
