

Post Report Delivery Activities

CompTIA PenTest+ (PT0-003)

Domains:

- 1.0: Planning and Scoping
- 5.0: Post-Engagement Activities

Objectives:

- 1.2: Explain collaboration and communication activities
- 1.5: Given a scenario, analyze the findings and recommend the appropriate remediation within a report
- 5.4: Explain cleanup and restoration activities

Video Overview

This video explores essential post-report delivery activities in penetration testing. You'll learn how to ensure a client's systems are fully restored to their original state after a test, understand the importance of client acceptance and lessons learned for continuous improvement, and discover the significance of follow-up actions and secure data destruction. These practices are fundamental for maintaining ethical conduct and protecting client confidentiality in your future career as a penetration testing professional.

Key Topics Covered

- **Post-Engagement Cleanup:** Removing all artifacts (shells, malware, backdoors, user accounts, groups) created during a penetration test.
- The significance of detailed note-taking for accurate cleanup and removal of residual risk.
- **Client Acceptance:** The formal process of the client acknowledging and agreeing with the penetration test findings and committing to remediation.
- **Lessons Learned:** Identifying weaknesses, enhancing security measures, and refining testing methods for both the client and the penetration testing team.
- **Follow-Up Actions and Retesting:** Collaborating with the client to implement fixes and conducting retests to validate remediation efforts.
- **Attestation of Findings:** Identifying the root cause of vulnerabilities, including processes, systems, or responsible parties, and its potential role in legal or investigative support.

- **Data Destruction:** Securely eliminating sensitive client data accessed or copied during the engagement using forensically sound methods.
- **Methods of Data Destruction:** Physical media shredding/degaussing, digital file overwriting, and crypto shredding.
