

# New Social Engineering Attacks

## CompTIA PenTest+ (PT0-003)

**Domain:** 4.0: Reconnaissance and Enumeration

**Objective:** 4.8: Given a scenario, perform social engineering attacks using the appropriate tools.

## Video Overview

This video introduces the fundamental concepts of social engineering attacks, a significant aspect of penetration testing that often bypasses traditional technical security measures. As you watch, consider how understanding human psychology can be as impactful as mastering technical skills in cybersecurity. The material presented will not only prepare you for relevant exam objectives, but also equip you with insights that can be applied in various professional settings, helping you identify and mitigate risks in real-world scenarios.

## Key Topics Covered

- Defining Social Engineering: Manipulation of feelings, thoughts, and perceptions to bypass security
- Common Social Engineering Tactics: Pretexting, phishing, spear phishing, whaling, vishing, and smishing
- Methods of Influence: Authority, scarcity, social proof, urgency, likeness, and fear
- Social Engineering Tools: Social Engineering Toolkit (SET) and Browser Exploitation Framework (BeEF)
- Prevention Strategies: Caution, vigilance, verification, and education
