

Principles of Safe Decision-Making ⚡

Follow these **principles** to make sound, **fraud-aware** decisions in your organization.

1. Think in Steps, Not Reactions 🧩

Break down any request into clear actions before responding.

Example: Before sending funds, list verification steps first.

2. Question the Unusual ?

Treat requests that deviate from normal patterns as suspicious.

Example: A sudden “emergency” request from a familiar contact should trigger verification.

3. Cross-Check and Confirm 🔗

Independently verify critical information instead of relying solely on the message received.

Example: Contact the vendor or manager via a known phone number or internal channel.

4. Document Your Decisions 📁

Keep a record of steps taken for accountability and review.

Example: Record approvals, verifications, and communications.

5. Maintain a Risk-Aware Mindset ⚠️

Always balance urgency with caution; avoid shortcuts.

Example: Even small deviations from normal procedures • can signal risk.

This revision shifts focus for **accepting**, fraud aware decisions in your organization.
